

Teresa Taggart
Program Director, Nuclear Medicine

As a registered Nuclear Medicine technologist of almost 4 decades, I have seen many changes within the healthcare industry. I have worked within free standing diagnostic clinics; provided inpatient and outpatient services with diagnostic and therapeutic procedures; provided lectures at the local, state, national and international level; participated in several research projects that evolved into today's standard practice; and now, educating the future technologists with state of the art knowledge. I advocate for the health care industry at the state and national congressional levels by remaining involved in several professional societies and represent the 18,000 certified nuclear medicine technologists at annual delegate conferences. I look forward to sharing information about health care in general and Nuclear Medicine specifically to anyone who is interested in maintaining high quality care for our citizens.

Presentation Summary

Nuclear Medicine, Health Care, and Career Pathways and Opportunities

I have worked within free standing diagnostic clinics; provided inpatient and outpatient services with diagnostic and therapeutic procedures; provided lectures at the local, state, national and international level; participated in several research projects that evolved into today's standard practice; and now, educating the future technologists with state of the art knowledge. I look forward to sharing information about health care in general and Nuclear Medicine specifically to anyone who is interested in maintaining high quality care for our citizens.
